

AMENDMENTS TO THE CLAIMS

1. (currently amended) A computer-implemented method for provisioning databases for users on a network, the method comprising the steps of:
  - a first party managing one or more database systems;
  - receiving from a plurality of second parties, information for subscribing to database services supported by the one or more database systems managed by the first party, wherein the database services include services for storing and managing data provided by the second parties; and
  - wherein the information is gathered during a registration process during which said second parties identify database resources for which the second parties are willing to pay;
  - providing, to database applications owned and controlled by the second parties, access to the database services to which the second parties are subscribed;
  - wherein the database applications, owned and controlled by the second parties, interact with the database systems managed by the first party by sending, to the database systems, database commands that conform to the database language supported by the database system;
  - whereby the second parties use the database applications under their ownership and control, while the database applications send the database commands to the database systems managed by the first party, thereby obviating the need for the second parties to manage the database systems used by their database applications;
  - wherein execution of the database commands allows the second parties to manipulate data objects stored within at least one of the one or more database systems;
  - delivering to one of said second parties, one or more messages which cause generation of user interfaces that allow the second party to subscribe to said database services provided by said first party; and

delivering to a user associated with said one of said second parties, one or more messages which cause generation of user interfaces that allow the user to access a database for a database service to which said one of said second parties has subscribed;  
wherein the steps of receiving, providing, and delivering are performed by one or more computing devices.

2. (original) The method of claim 1 wherein:  
at least one of said second parties is an application service provider that provides application services to a plurality of third parties over said network; and  
the step of providing access to the database services includes providing database services to an application used by said application service provider to provide said application services to said third parties.
3. (original) The method of claim 1 further comprising the steps of:  
receiving over said network a request to perform a database management operation from a user associated with a particular second party of said plurality of second parties; and  
responding to said request by performing said database management operation on one or more databases controlled by said first party without human intervention by said first party.
4. (cancelled)
5. (original) The method of claim 1 wherein the step of providing access over a network includes providing access over a public network of computer networks
6. (original) The method of claim 3 wherein the step of performing the database management operation involves allocating a different amount of resources to said particular second party than is currently allocated for said particular second party.
7. (cancelled)

8. (previously presented) The method of claim 1 wherein the user interfaces contain controls for specifying user profile information, payment information, and selection of database services.
9. (cancelled)
10. (original) The method of claim 1, wherein:  
the first party also provides database application services over said network; and  
the method further comprises the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to access a database application service to which said one of said second parties has subscribed.
11. (original) The method of claim 1, further comprising the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to indicate changes to at least one of profile information, payment information, and the selection of services to which said one of said second parties is subscribed.
12. (original) The method of claim 1, further comprising the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to supply content for a subscribed database.
13. (original) The method of claim 1, further comprising the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to develop a new database application.
14. (original) The method of claim 1, further comprising the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to integrate an external service.

15. (original) The method of claim 1, further comprising the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that present a status of a user subscribed resource selected from database resources managed by said first party.
16. (previously presented) The method of claim 1, further comprising the steps of:  
delivering over the network, to a user associated with one of said second parties,  
one or more messages which cause generation of user interfaces that  
present the user with a user-selectable representation of a web site building  
wizard for building a Web page with a database component associated with  
an interface to a database;  
receiving user input indicating the web site building wizard; and  
executing said web site building wizard, including presenting a series of screens to  
the user to prompt user input for building the Web page.
17. (original) The method of claim 1, further comprising the step of the first party  
updating the one or more database systems by receiving from a community server  
over the network an update to the one or more database systems, wherein the  
community server provides the update to a plurality of service providers over said  
network.
18. (original) The method of claim 1, further comprising the step of the first party  
sending to a community server a status of a user subscribed resource, wherein the  
user subscribed resource is maintained by said first party.
19. (original) The method of claim 1, further comprising presenting to a user  
associated with said first party a user interface to allow said first party to configure  
a database device used to provide said database services as one of a dedicated  
device and a plurality of virtual devices.
20. (original) The method of claim 1, further comprising presenting to a user  
associated with said first party a user interface to allow said first party to configure  
at least one of a dedicated device and a virtual device of a plurality of virtual

devices as one of a staging device available only to a database service developer for developing database services, and a production device for making database services available to a user who is not the database service developer.

21. (original) The method of claim 20, further comprising presenting a user interface for transferring an application from a staging device to a production device.
22. (previously presented) The method of claim 1 wherein:  
the step of delivering to one of said second parties over the network one or more messages which cause generation of user interfaces that allow the party to subscribe to said database services is performed as part of a registration process;  
the interfaces include controls for receiving a user input value for a maximum amount of subscribed resources; and  
the method further includes the step of presenting an alert if an amount of subscribed resources consumed by said party exceeds a threshold percentage of the maximum amount of subscribed resources.
23. (original) The method of claim 22, further comprising the steps of:  
receiving a user input value for a particular threshold percentage; and  
presenting an alert if an amount of resources consumed by said party exceeds the particular threshold percentage of the maximum amount of subscribed resources.
24. (original) The method of claim 22, wherein the maximum amount of subscribed resources includes a maximum amount of at least one of  
an amount of storage space,  
a number of users connected to a platform in a period of time,  
an amount of processor time used in a period of time, and  
a number of transactions completed in a period of time.
25. (original) The method of claim 12, further comprising the steps of:  
presenting to the user a set of selectable sources of content;

receiving user input indicating a selected source; and  
launching a source update process to connect to the selected source and update a  
database with information received from the selected sources.

26. (original) The method of claim 25, wherein  
the user input indicating a selected source also indicates a schedule for updating  
from the selected source; and  
the source update process connects to the selected source according to the schedule  
for updating from the selected source.
27. (original) The method of claim 12, further comprising the steps of:  
in response to user input that specifies that data should be loaded into a subscribed  
database, determining whether the subscribed database currently exists for  
said one of said second parties; and  
creating the subscribed database if the subscribed database does not currently exist  
for said one of said second parties.
28. (original) The method of claim 13, further comprising the steps of:  
presenting representations of selectable application development kits;  
receiving user input indicating a selected development kit from the user; and  
launching a staging process including  
configuring consumable database resources on a staging database device, wherein  
a staging database device can be accessed by the user for developing the  
new database application and cannot be accessed by users associated with  
other parties of said plurality of second parties,  
receiving development input from the user; and  
building a new application on the staging database device based on the selected  
development kit and the development input.
29. (original) The method of claim 28, the step of developing the new database  
application further comprising the steps of

after receiving user input indicating a selected development kit, determining whether a client process of the selected development kit must be downloaded to a computer of the user over the wide area network; and if it is determined the client process of the selected development kit must be downloaded, downloading the client process to the computer of the user over the wide area network before the step of building the new application.

30. (original) The method of claim 28, the step of developing a new database application further comprising the steps of:  
receiving input from the user indicating the new application is ready for operational use; and  
in response to receiving input from the user indicating the new application is ready for operational use, launching a production transfer process including sending a request to the first party to transfer the new application to a production device on which the new application may be accessed by users who did not develop the new application.
31. (original) The method of claim 14, further comprising integrating the external service, wherein the step of integrating comprises the steps of:  
presenting a representation of a selectable external service;  
receiving user input indicating a selected external service; and  
launching an integration process to provide the external service to the user.
32. (original) The method of claim 31, wherein the selectable external service includes at least one of a payment service, a mobile Internet portal, an enterprise resource planning application, and a customer relationship management application.
33. (original) The method of claim 1, further comprising the first party performing at least one of the steps of:  
setting up database parameters;  
reporting database usage;  
backing up the database;

upgrading the database;  
controlling database versions;  
implementing database security; and  
implementing data security within the database.

34. (original) The method of claim 1, further comprising the steps of:  
if a costing database does not already exist, then  
automatically creating the costing database of database resource usage by user, and  
initiating a costing model with price per unit of consumable resource per service;  
inserting data into the costing database based on actual use of database resources  
by the user;  
executing the costing model to compute a cost-per-user based on the data in the  
costing database and the price per unit of consumable resource per service;  
and  
billing the user for the cost computed by the costing model.
35. (previously presented) The method of claim 34, wherein the costing model  
supports:  
fixed price per unit of usage;  
variable price per unit usage as a function of usage;  
flat price up to a maximum value of usage;  
different prices for different users;  
different prices for different services; and  
different prices for increments of usage above a maximum subscribed usage.
36. (currently amended) A computer-readable storage medium storing instructions for  
provisioning databases for users on a network, the instructions comprising  
instructions for performing the steps of:  
a first party managing one or more database systems;  
receiving from a plurality of second parties, information for subscribing to  
database services supported by the one or more database systems managed

by the first party, wherein the database services include services for storing and managing data provided by the second parties; and  
wherein the information is gathered during a registration process during which said second parties identify database resources for which the second parties are willing to pay;  
providing, to database applications owned and controlled by the second parties, access to the database services to which the second parties are subscribed;  
wherein the database applications, owned and controlled by the second parties, interact with the database systems managed by the first party by sending, to the database systems, database commands that conform to the database language supported by the database system;  
whereby the second parties use the database applications under their ownership and control, while the database applications send the database commands to the database systems managed by the first party, thereby obviating the need for the second parties to manage the database systems used by their database applications;  
wherein execution of the database commands allows the second parties to manipulate data objects stored within at least one of the one or more database systems;  
delivering to one of said second parties, one or more messages which cause generation of user interfaces that allow the second party to subscribe to said database services provided by said first party; and  
delivering to a user associated with said one of said second parties, one or more messages which cause generation of user interfaces that allow the user to access a database for a database service to which said one of said second parties has subscribed.

37. (currently amended) The computer-readable storage medium of claim 36 wherein: at least one of said second parties is an application service provider that provides application services to a plurality of third parties over said network; and

the step of providing access to the database services includes providing database services to an application used by said application service provider to provide said application services to said third parties.

38. (currently amended) The computer-readable storage medium of claim 36 further comprising instructions for performing the steps of:  
receiving over said network a request to perform a database management operation from a user associated with a particular second party of said plurality of second parties; and  
responding to said request by performing said database management operation on one or more databases controlled by said first party without human intervention by said first party.
39. (cancelled)
40. (currently amended) The computer-readable storage medium of claim 36 wherein the step of providing access over a network includes providing access over a public network of computer networks.
41. (currently amended) The computer-readable storage medium of claim 38 wherein the step of performing the database management operation involves allocating a different amount of resources to said particular second party than is currently allocated for said particular second party.
42. (cancelled)
43. (currently amended) The computer-readable storage medium of claim 36 wherein the user interfaces contain controls for specifying user profile information, payment information, and selection of database services.
44. (cancelled)
45. (currently amended) The computer-readable storage medium of claim 36, wherein: the first party also provides database application services over said network; and

the computer-readable medium further comprises instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to access a database application service to which said one of said second parties has subscribed.

46. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to indicate changes to at least one of profile information, payment information, and the selection of services to which said one of said second parties is subscribed.
47. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to supply content for a subscribed database.
48. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to develop a new database application.
49. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that allow the user to integrate an external service.
50. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that present a status of a user subscribed resource selected from database resources managed by said first party.
51. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the steps of:

- delivering over the network, to a user associated with one of said second parties, one or more messages which cause generation of user interfaces that present the user with a user-selectable representation of a web site building wizard for building a Web page with a database component associated with an interface to a database; receiving user input indicating the web site building wizard; and executing said web site building wizard, including presenting a series of screens to the user to prompt user input for building the Web page.
52. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of the first party updating the one or more database systems by receiving from a community server over the network an update to the one or more database systems, wherein the community server provides the update to a plurality of service providers over said network.
53. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the step of the first party sending to a community server a status of a user subscribed resource, wherein the user subscribed resource is maintained by said first party.
54. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for presenting to a user associated with said first party a user interface to allow said first party to configure a database device used to provide said database services as one of a dedicated device and a plurality of virtual devices.
55. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for presenting to a user associated with said first party a user interface to allow said first party to configure at least one of a dedicated device and a virtual device of a plurality of virtual devices as one of a staging device available only to a database service developer for developing database services, and a production device for making database services available to a user who is not the database service developer.
56. (currently amended) The computer-readable storage medium of claim 55, further comprising instructions for presenting a user interface for transferring an application from a staging device to a production device.

57. (currently amended) The computer-readable storage medium of claim 36 wherein:  
the step of delivering to one of said second parties over the network one or more  
messages which cause generation of user interfaces that allow the party to  
subscribe to said database services is performed as part of a registration process;  
the interfaces include controls for receiving a user input value for a maximum amount of  
subscribed resources; and  
the computer-readable medium further includes instructions for the step of presenting an  
alert if an amount of subscribed resources consumed by said party exceeds a  
threshold percentage of the maximum amount of subscribed resources.
58. (currently amended) The computer-readable storage medium of claim 57, further  
comprising instructions for performing the steps of:  
receiving a user input value for a particular threshold percentage; and  
presenting an alert if an amount of resources consumed by said party exceeds the  
particular threshold percentage of the maximum amount of subscribed resources.
59. (currently amended) The computer-readable storage medium of claim 57, wherein the  
maximum amount of subscribed resources includes a maximum amount of at least one of  
an amount of storage space,  
a number of users connected to a platform in a period of time,  
an amount of processor time used in a period of time, and  
a number of transactions completed in a period of time.
60. (currently amended) The computer-readable storage medium of claim 47, further  
comprising instructions for performing the steps of:  
presenting to the user a set of selectable sources of content;  
receiving user input indicating a selected source; and  
launching a source update process to connect to the selected source and update a database  
with information received from the selected sources.
61. (currently amended) The computer-readable storage medium of claim 60, wherein  
the user input indicating a selected source also indicates a schedule for updating from the  
selected source; and

- the source update process connects to the selected source according to the schedule for updating from the selected source.
62. (currently amended) The computer-readable storage medium of claim 47, further comprising instructions for performing the steps of:  
in response to user input that specifies that data should be loaded into a subscribed database, determining whether the subscribed database currently exists for said one of said second parties; and  
creating the subscribed database if the subscribed database does not currently exist for said one of said second parties.
63. (currently amended) The computer-readable storage medium of claim 48, further comprising instructions for performing the steps of:  
presenting representations of selectable application development kits;  
receiving user input indicating a selected development kit from the user; and  
launching a staging process including  
configuring consumable database resources on a staging database device, wherein a staging database device can be accessed by the user for developing the new database application and cannot be accessed by users associated with other parties of said plurality of second parties,  
receiving development input from the user; and  
building a new application on the staging database device based on the selected development kit and the development input.
64. (currently amended) The computer-readable storage medium of claim 63, the step of developing the new database application further comprising the steps of  
after receiving user input indicating a selected development kit, determining whether a client process of the selected development kit must be downloaded to a computer of the user over the wide area network; and  
if it is determined the client process of the selected development kit must be downloaded, downloading the client process to the computer of the user over the wide area network before the step of building the new application.

65. (currently amended) The computer-readable storage medium of claim 63, the step of developing a new database application further comprising the steps of:  
receiving input from the user indicating the new application is ready for operational use;  
and  
in response to receiving input from the user indicating the new application is ready for operational use, launching a production transfer process including sending a request to the first party to transfer the new application to a production device on which the new application may be accessed by users who did not develop the new application.
66. (currently amended) The computer-readable storage medium of claim 49, further comprising instructions for integrating the external service, wherein the step of integrating comprises the steps of:  
presenting a representation of a selectable external service;  
receiving user input indicating a selected external service; and  
launching an integration process to provide the external service to the user.
67. (currently amended) The computer-readable storage medium of claim 66, wherein the selectable external service includes at least one of a payment service, a mobile Internet portal, an enterprise resource planning application, and a customer relationship management application.
68. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for the first party performing at least one of the steps of:  
setting up database parameters;  
reporting database usage;  
backing up the database;  
upgrading the database;  
controlling database versions;  
implementing database security; and  
implementing data security within the database.
69. (currently amended) The computer-readable storage medium of claim 36, further comprising instructions for performing the steps of:

- if a costing database does not already exist, then  
automatically creating the costing database of database resource usage by user, and  
initiating a costing model with price per unit of consumable resource per service;  
inserting data into the costing database based on actual use of database resources by the  
user;  
executing the costing model to compute a cost-per-user based on the data in the costing  
database and the price per unit of consumable resource per service; and  
billing the user for the cost computed by the costing model.
70. (currently amended) The computer-readable storage medium of claim 69, wherein the  
costing model supports:  
fixed price per unit of usage;  
variable price per unit usage as a function of usage;  
flat price up to a maximum value of usage;  
different prices for different users;  
different prices for different services; and  
different prices for increments of usage above a maximum subscribed usage.
71. (currently amended) A computer-implemented method, comprising:  
an internet database service provider (IDSP) party managing one or more database  
systems;  
receiving from a plurality of second parties, information for subscribing to database  
services supported by the one or more database systems managed by the IDSP,  
wherein the database services include services for storing and managing data  
provided by the second parties; and  
wherein the information is gathered during a registration process during which said  
second parties identify database resources for which the second parties are willing  
to pay;  
providing, to database applications owned and controlled by the second parties, access to  
the database services to which the second parties are subscribed;  
wherein the database applications, owned and controlled by the second parties, interact  
with the database systems managed by the IDSP by sending, to the database

systems, database commands that conform to the database language supported by the database system;

whereby the second parties use the database applications under their ownership and control, while the database applications send the database commands to the database systems managed by the first party, thereby obviating the need for the second parties to manage the database systems used by their database applications;

wherein execution of the database commands allows the second parties to manipulate data objects stored within at least one of the one or more database systems; delivering to one of said second parties, one or more messages which cause generation of user interfaces that allow the second party to subscribe to said database services provided by the IDSP; and delivering to a user associated with said one of said second parties, one or more messages which cause generation of user interfaces that allow the user to access a database for a database service to which said one of said second parties has subscribed; wherein the steps of receiving, providing, and delivering are performed by one or more computing devices.

72. (previously presented) The method of claim 71, wherein one of the plurality of second parties is an Internet Service Provider (ISP).
73. (previously presented) The method of claim 71, wherein one of the plurality of second parties is an Application Service Provider (ASP).
74. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information that specifies a maximum amount of storage space of the database resources to be used by the particular second party.
75. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information that specifies a maximum amount of users of the database resources to be used by the particular second party.

76. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information that specifies a maximum transaction rate of the database resources to be used by the particular second party.
77. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information that specifies a frequency of backup of the database resources to be used by the particular second party.
78. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information that specifies a frequency and format of usage reports of the database resources to be used by the particular second party.
79. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information about Internet access for mobile devices to be used by the particular second party.
80. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information about payment service for the database resources to be used by the particular second party.
81. (previously presented) The method of Claim 1, where the step of receiving information includes receiving, from a particular second party, information about development of applications for the database resources to be used by the particular second party.
82. (previously presented) The method of Claim 1, wherein the second parties control the source code of the database applications that the second parties use to send database commands to the database management systems managed by the first parties.
